# REDIRANGE

**Introducing the RediRange from RPM, a new group of products that are “ready when you are!”**

**Over the years, we’ve heard from many livestock and property owners who’ve told us to “develop a range of products we can take into the field, install easily and that include the items we work with and need the most.”**

**So, we gave our R&D team the task of selecting and developing robust products that would meet the challenge, and the result is the new RediRange from RPM.**

**The philosophy behind RediRange is to design and manufacture products that we believe you’ll find easy to work with. There’s no welding required and the installation is simple yet capable of withstanding the harshest elements thrown at it.**

**We’ve launched RediRange with a selection that includes RediRail 115/42 Cattle Rail Joiner, our innovative RediGate and multi-functional RediPosts, with other products under development that will be added to the RediRange when completed.**

**With RPM’s RediRange, you’re guaranteed products that are “ready when you are.” For more information on RediRange products, and to subscribe to our electronic newsletter for product updates, visit [www.rpmrural.com](http://www.rpmrural.com)**

## REDIRAIL • REDIGATE • REDIPOST

### **Waste not, Weld not!**

**With RediRange, there’s no welding required. Just look for our “No Welding Required” symbol next to each product as your guarantee.**

**Waste not! - You only use the materials you need for the job!**

**Weld not! - All RediRange products can be fastened with Tek screws.**

## 115/42 Cattle Rail Joiner

RediRail 115/42 Cattle Rail Joiner is the perfect way to add lengths of cattle rail in the field. All you need are some Tek screws and RediRail joiners and you're in business, no matter where you are in the paddock. You'll find the joins neat and robust, and the simplest way to add cattle rail to your yard that's ever been invented. This is a product manufactured exclusively by RPM Rural Products. (Registered Design)

## Gate Entrance System

The quickest and easiest way to install a new gate at your property, whether for a grand entrance to the home or to keep trespassers out, is with RPM's new RediGate. A combination of 115/42 Cattle Rail and our new "RediPosts" in 100x100mm Duragal SHS makes RediGate a breeze to erect, and precision laser-cut slots means the rail fits like a glove. You can vary the size of the entrance gate and the rails in your gate or fence if using a different fencing wire.

Best of all, thanks to the innovative FlexiTab, there's no welding required. RediGate also comes with a special FlexiTab bending tool, a tube of poly-filla for finishing joins, SHS post caps, and it's all flat-packed to easily fit into the back of your ute. (patent pending PCT 2007901465)

## Fence And Corner Stay System

RPM's RediPost is the ideal partner when it comes to extending your gate entrance into a fence line. Or it's great for permanent yarding such as in Feedlots or property boundaries. It's available in 75x75mm and 100x100mm and is also ideal for Fence Corner Stays. You'll like the ease of working with precision laser-cut slots which allows you to vary the amount of rails in your fence if using alternative fencing wire. Includes caps, a post anchor rod and hole to prevent the post lifting after the concrete sets.

## Ready when you are!

Our patented FlexiTab makes RediPost the simplest and easiest method there is for installing Cattle Rail, because there's no welding required. Set your RediPost in the ground, bend the FlexiTab out to accomodate the Cattle Rail, then Tek Screw it in and you're done! And what's more, it works on both straight and angled joins!

New patented FlexiTab makes it easy for you.

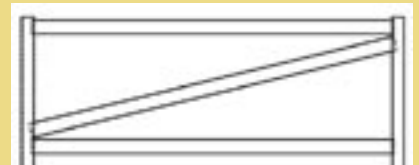

Corner Stays are made easy with RediPost.
